

PRODUCT CODE: CK-CCD-DUAL43R

BARCODE: 9332820008135

DESCRIPTION: CCD 170° Butterfly/Flush Mount Mini Camera and Rear View Mirror with 4.3” Reversing Monitor

The CCD-DUAL170 is a versatile CCD micro camera supplied with 2 heads to allow for a choice of mounting options. The butterfly mount is used to screw to number plates or under tailgate handles while the spare head allows you to flush mount into the bumper. The camera cable connects via a mini plug to allow threading through small drill holes.

This high quality kit includes the NSR-43R, a sleek OEM style replacement rear view mirror with a built in 4.3” LCD monitor. When driving, the mirror looks like a normal OEM mirror, until the car is placed in reverse – the monitor switches on and the image appears.

As with all Nesa reversing system products, both camera and mirror monitor are backed by a 3 year warranty.
