

DAB DIGITAL RADIO TUNER

PRODUCT CODES: DAB-201, DAB-202 & DAB-203

DAB+ radio offers far superior sound quality to that provided by analogue AM or FM radio. It is widely used in metro & populated areas however it should be noted that the range is not as extensive as that of analogue radio. We offer 3 variations depending on what type of antenna you would like to use. 2 kits with DAB antennas supplied, as well as a third kit to utilise your original car radio antenna.

The **DAB-201** is an add-on upgrade to add digital radio to your car audio system. The system uses RCA out for audio & video so can often be integrated to existing screens & car radios, otherwise a screen can be selected from the many available in the NESA range to suit the vehicle. The system consists of a small hideaway tuner box, remote eye & remote to allow for a stealth installation as well as a dedicated magnetic mount DAB antenna & 3 x Channel RCA for the audio & video outputs. Integration to your existing audio/video system should be discussed with your car audio specialist as this will vary from car to car. You need a screen with RCA input & an audio input to complete this system.

The **DAB-202** kit is the same as above but with a window mount antenna instead of the magnetic antenna.

The **DAB-203** kit is available to integrate your original AM/FM car antenna for improved range & performance. This kit uses an active amp/splitter box to split your cars existing AM/FM antenna to the DAB tuner and your car radio. No need to use the magnetic or window mount antennas supplied with the other kits.

DAB-203 KIT includes

- DAB+ Digital Tuner
- DAB Digital Radio Amplifier/Splitter
- Extension Cables

*Amplifier/Splitter
 (supplied with the DAB-203 kit only)*

Whether you add this to an OEM system or an aftermarket audio or audio/visual system you will gain from the outstanding sound quality of digital radio on the move.
