

## Clip On Rear View Mirror with 9.6" HD Monitor

Super versatile, the NSR-96Clip Full HD clip on mirror can split a single camera horizontally [top half & bottom half] to show 2 different view angles. Top half of the camera displays as an always on camera for rear view, especially useful for utes with canopies or camera mounted on a caravan or trailer to give you a normal rear view. The bottom half of the camera switches when the vehicle is in reverse just as a regular reverse camera. As the NSR-96CLIP has 2 camera inputs, you can use 2 separate cameras. This can be great to use on caravans, camera 1 acting as your cars normal reverse camera, and camera 2 on the caravan giving you always on rear view and reverse camera split from a single camera.

Easy to install, just has 2 rubber straps that attach it to your existing mirror. No need to remove your existing mirror at all. Operates on both 12v and 24v vehicles. Works with both standard CVBS cameras and AHD cameras.
