

OBD Plug 'n Play 4G/GPS Tracker

The OBD-400 is a 4G/GPS intelligent tracking device compatible with passenger and light commercial vehicles. With a much larger coverage and range over previous 3G models, the OBD-400 is simple and effective way to track your vehicles. No installation costs, just plug in to the vehicle's OBDII port. Live tracking with 3 minute logs (option to upgrade to 1 minute logs) - if out of mobile tower range, the logs are stored on the device and uploaded once back in range. Full reports such as mileage, idle time and speeding reports are available. The OBD-400 can send instant alerts via SMS or email if a driver is speeding. Effective anti-theft alert features: Geofence locations can be added anytime and users can be alerted if the vehicle is removed from that location; The OBD-400 can also alert you if the device is removed by the driver. Free Android and Apple iOS app available for download. Tracking requires monthly subscription.
